Team Name:

ByteScribes

Vision Statement:

We've been hired by the Library of Alexandria (Post Burn) in order to digitize their recently rediscovered works into an extensive online library system. Our main purpose for this database is to provide an easy way for lovers of the ancient epics and knowledge of old to find and enjoy these historical relics.

Scope Statement:

Our database will provide a convenient way for pursuers of the lost texts to search the catalogues, check the status on scrolls currently on loan, and reserve an item, should it draw their fancy. The system will also allow the spirits of the long-deceased staff to view things like checkout status, return status, the addition of any newly rediscovered works, and the changing of any sort of membership with the library. Additionally to these actions, the database will be capable of generating complex reports and calculations, such as fines, monthly trends, new big-shot books, and much more.
